

eCLEANER - Cleaning Filter INSTRUCTIONS

Please follow these instructions in the mentioned order.

ENAGIC recommends to do this cleaning every 2 – 4 weeks, depending on how many water you produce with the machine and what quality the input water is.

- Turn your machine off
- Remove the unplug from the mains
- Fill the eCleaner with one package of citrus-acid-powder
- Remove the built-in High-Grade-Filter including its seal rings and replace it with the cleaning cartridge and its seal rings
- Place both the white flexible hose and grey secondary hose into an empty cup or small bucket
- Switch the diverter on the ION setting and turn on the faucet to permit water to flow through your machine for about 10 seconds (about 1 liter) until the cup has filled halfway allowing the cup to retain the residual water and then turn the faucet off. Be sure not to spill the cup or its contents
- Let the machine sit for 5 - 8 hours or overnight
- Turn the water on and flush the machine together with the eCleaner for 3 - 5 minutes to flush out the cleaning powder
- Turn the water off and replace the eCleaner and its seal rings with the High-Grade-Filter and its seal rings
- Let the water flow again for app. 30 – 60 seconds to flush out leftovers of cleaning powder

- Plug the machine to the power line again
- Turn your machine on. Now enjoy clean, good Kangen Water
- After turning on your machine, there is a possibility that calcium flows from the machine. Please spill this water to the drain

NOTE:

After each use of the eCleaner, please flush it with water, leave the cartridge open and let it dry before you store it in your cupboard for the next use.

You can order the eCleaner as extra-supply at ENAGIC™ in Düsseldorf.

You find the address and phone number on my homepage (www.kangen-wasser-deutschland.de) under „[DIE FIRMA ENAGIC™](#)“ and the supply-order-form under „[DOWNLOAD](#)“.
